

MOTHER! LOOK AT CHILD'S TONGUE

If cross, feverish, constipated, give "California Syrup of Figs"

A laxative today saves a sick child tomorrow. Children simply will not take the time from play to empty their bowels, which become clogged up with waste, liver gets sluggish; stomach sour.

Look at the tongue, mother? If coated, or your child is listless, cross, feverish, breath bad, restless, doesn't eat heartily, full of cold or has sore throat or any other children's ailment give a teaspoonful of "California Syrup of Figs" then don't worry, because it is perfectly harmless, and in a few hours all this constipation poison, sour bile and fermenting waste will gently move out of the bowels, and you have a well playful child again. A thorough "inside cleansing" is oftentimes all that is necessary. It should be the first treatment given in any sickness.

Beware of counterfeited syrup. Ask at the store for a pleasant bottle of "California Syrup of Figs," which has full directions for babies, children of all ages and for grown-ups plainly printed on the bottle. Adv.

His Finances.
Say, Jack, lend me an X.
That's an unknown quantity with me, dear boy."

Only One "BROMO QUININE"
This is CALCIUM QUININE—Quinine. Look for
the signature of E. W. COOPER, Chemist and
Manufacturer, New York City, on the bottle.

Love does not always wait for opportunity to enter the door before it flies out of the window.

Liquid love is a very wisdom. Spend a day at the Love Park Home, the love that's all there is.

Little Rock, Ark., citizens the other day caught a wandering alligator in a street near his home.

THIS WOMAN'S SICKNESS

Quickly Yielded To Lydia E. Pinkham's Vegetable Compound.

Baltimore, Md.—"I am more than glad to tell what Lydia E. Pinkham's Vegetable Compound did for me. I suffered dreadful pains and was very irregular. I became alarmed and sent for Lydia E. Pinkham's Vegetable Compound. I took it regularly until I was without a cramp or pain and felt like another person, and it has now been six months since I took any medicine at all. I hope my little note will assist you in helping other women. I now feel perfectly well and in the best of health." —Mrs. AUGUST W. KONIGER, 1632 Hollins Street, Baltimore, Md.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotic or harmful drugs, and to-day holds the record of being the most successful remedy for female ills we know of, and thousands of voluntary testimonials on file in the Pinkham laboratory at Lynn, Mass., seem to prove this fact.

For thirty years it has been the standard remedy for female ills, and has restored the health of thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, tumors, irregularities, etc.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

Be Vigorous and Ambitious

Drive the poisonous waste from your sluggish bowels, and start your liver to working perfectly with gentle, delicious HOT SPRINGS LIVER BUTTONS.

They purify the blood, put an elixir into your blood and put vigor and ambition into people who lack energy.

Take them, and headaches, nervousness, sleeplessness and dizziness will vanish. They are simply fine, especially for women and elderly people.

Cut out and send to other individuals. Take little chocolate coated HOT SPRINGS LIVER BUTTONS for a week, and notice the improvement next up, and please vanish. All chocolate, 25 cents. Free sample from Hot Springs Chemical Co., Hot Springs, Ark.

THE AMERICAN HOME

WILLIAM A. RADFORD EDITOR

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to the subject of building, for the readers of this paper. On account of his wide experience as Editor, Author and Manufacturer, he is without doubt the best authority on these subjects. Address all inquiries to William A. Radford No. 102 Franklin Avenue, Chicago, Ill., and only enclose two-cent stamp for reply.

The biggest thing in any man's life is his home. It is the inspiration and the center of all his ambitions, of all his hope for success. Without a home a man is a ship at sea without a rudder. A home gives a man a reason for living. Every man craves it, every man needs it.

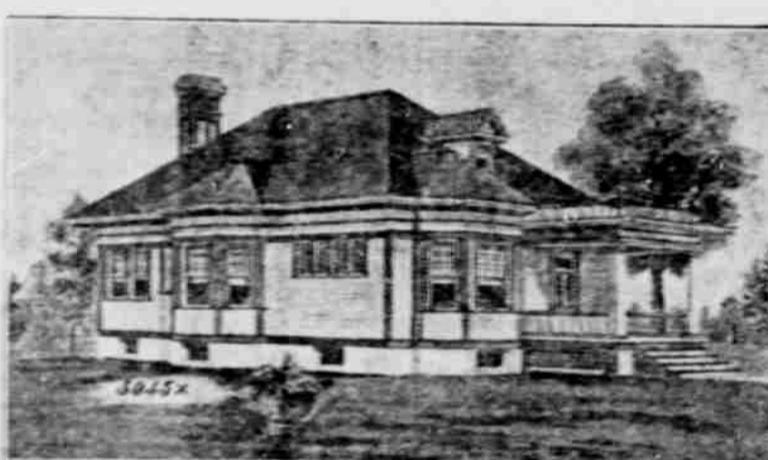

And in these days it is possible for anyone who is paying rent right along, to save for himself the landlord's profit, and own his own home.

There are many landlords that are not only making a living, but growing wealthy, by borrowing money, building houses with it, and renting them to people who, if they realized it, could, with little effort, just as well build or buy houses for themselves. One hundred dollars saved up and paid down will be enough at first payment on a modest one-story home in almost any town or city in the United States, and will start you on the road to ownership. The rest always comes easier, for there is now a constant incentive to added effort and thrift.

Of course, there should be reason in this as in other things. One should not buy too expensive a place, any more than he should attempt to "show off" by buying too elaborate and ex-

travagantly designated as the "bungalow"—a word of East Indian origin—and the extent to which buildings of this class are being multiplied all over the country. This type of house—built either wholly one-story or with a few rooms directly under the roof in what would otherwise be the attic—is such as to lend itself to a great variety of treatment and arrangement, these features, however, being governed altogether by the individual tastes and requirements of the prospective occupant.

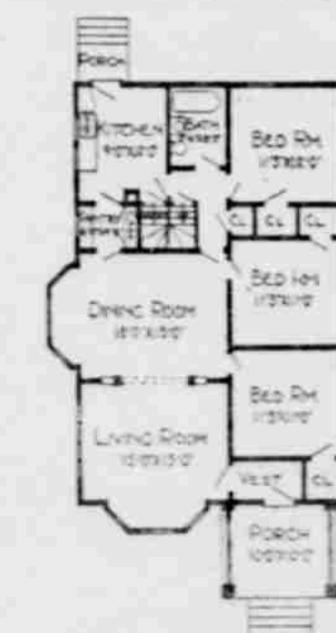

A very attractive, cozy and well-arranged six room cottage home of the type referred to is illustrated in the half-tone perspective view herewith and the accompanying floor-plan. The width of the house is 11 feet; height 17 feet. The basement extends under the entire house, and there is an auto. The rooms are all well lighted, the three bedrooms, each of which has a spacious closet of its own, are arranged along one side of the house, the other side being devoted to the working activities of domestic life. The front porch is sufficiently large to provide a shaded outdoor gathering place for the family in fine weather. The front door opens into a vestibule, from which through a door at the left, we enter the airy living room with its large bay window at the front end. Four small casement windows also admit light over the library bookcase or other furnishings that may be ranged along the side of the room. The living room opens directly into the dining room through an opening flanked by two columns. At one end of the dining

pensive clothing. The more expensive home will come later if you first "make good" by adjusting your demands to your abilities, and exercising patience. In the meantime, remember that you are saving the landlord's profit. You are also reaping the "unearned increment" of increased valuation on your property, and it is a fact that in any live, growing city or town the appreciation in value of property will more than offset depreciation and cost of upkeep on the improvements there-

room, another bay window admits ample sunshine, and enlarges the view to be had from the inside; at the other end, doors open into the front and middle bedrooms. Connection between dining room and kitchen is through the pantry, which is lighted by a window and provided with a shelved cupboard or bullet for china, glassware, etc. A small hallway leads directly from the dining room to the bathroom on the middle line of the house, at the rear. This hallway has a linen closet, and opens on the right into the rear bedroom, and the left into the kitchen. A rear porch off the kitchen gives access to and from the back yard.

The cost of building such a house as this would range in different localities from \$1,500 to \$2,500.

Floor Plan.

on. Then, again, there is the great satisfaction and pride of being under your own roof which cannot be sold over your head, and the delight of being able to "potter around" and fix things up according to your own fancy, knowing all the while that everything added to the way of convenience or improvement is so much added in dollars and cents to the value of the property.

Seemed What She Wanted.

"I see this medicine is good for man and beast." "Yes," said the druggist. "Gimme a bottle. I believe that's the right combination to help my husband." —Kansas City Journal.

POULTRY

CARING FOR LAYING PULLETS

Dry, comfortable houses should be provided and an abundance of green is necessary.

Changes in management of poultry can not be made during the course of the breeding and hatching season without seriously interfering with the results. Any new methods of management, feeding, etc., which one wishes to use, must be inaugurated at the beginning of the season and adhered to throughout.

The bringing of the chickens in from the range upon which they have grown from little chicks, into the laying house, is apt to be a very violent and abrupt transition. An authority

Green Food Growers.

upon the raising of poultry profitably, has the following to say on the subject: "It has seemed in studying the birds in the fall of the year that the change from the range to the laying house, was an important one in the life of the bird, and that the results during the subsequent winter with reference to egg production depended much upon the way this transition was made. It seemed advisable both on general grounds and from observation of the birds themselves to make this change as gradual as possible. With this idea in mind the pullets have been brought into the houses from the range much earlier during the past few years than was the custom before—and the results have been excellent. When the pullets are first brought in it is not advisable to shut them up entirely in the houses at once. On the contrary, our work is planned in such a way that there is always a freshly-seeded yard full of green grass for the birds to run in after they are brought into the house until cold weather sets in. The fowls are brought from free range into a condition of restricted range, but with better pasture on the restricted range than on the free range. The yards are freshly seeded and have not been trampled down or burned or dried out by the sun, as is the grass on the open range from which the birds are taken. In this way the attempt is made to have the transition from the range conditions to house conditions as gradual as possible. After about two months of restricted range, the birds are finally shut up in a curtain front house for the winter.

The feed of all adult birds, whether pullets or not, consists of two essential parts: (a) The whole or cracked grains scattered in the litter, and (b), the mixture of dry ground grains generally known as a dry mash. In addition to the grains and dry mash, oyster shell, dry cracked bone, grit and charcoal are kept in slatted troughs, and are accessible at all times. Plenty of clean water is furnished.

About five pounds of clover hay cut into one-half inch lengths is fed dry daily to each 100 birds in winter.

A. Empty Flat; B. Oats Started to Sprout; C. Oats Well Sprouted.

When the wheat, oats, and cracked corn are given, the birds are always ready and anxious for them, and they scratch in the litter for the last kernel before going to the trough where an abundance of feed is in store. The hens like the broken and whole grains better than the mixture of the fine, dry materials. Yet they help themselves to it, a mouthful or two at a time, whenever they seem to need it.

There is a general unanimity of opinion among poultrymen that the fowls do best when some form of green or succulent food is given them during the winter months.

In fact, it is an absolute necessity, if best results are to be obtained. The function of green food is largely in the nature of a digestive stimulant.

Green sprouted oats have been widely used in recent years as a green food for poultry and it is a most excellent thing. The oats are fed when they are from four to six inches in height, and are fed at the rate of a piece of the matted oats and attached green stalks about six by eight inches square for each 100 birds per day.

In Winter Pe-ru-na CATARRH TONIC For COUGHS & COLDS

M. R. Samuel McKinley, 1215 Grand Ave., Kansas City, Mo., writes: "I can honestly say that I owe my life to Peruna. Travelling from town to town, and having to go into all kinds of badly heated buildings, trying my trade as auctioneer, it is only natural that I had colds frequently.

"Last December I contracted a severe cold which, through neglect on my part, settled on my chest. I heard of Peruna. It cured me, so I cannot praise it too highly."

Those who prefer tablets to liquid medicines can now procure Peruna in tablet form.

Brentwood

BUILT ON GREAT ORE BANK

Site of Minnesota City Will Be Moved So That Riches Underneath May Be Mined.

One billion dollars of value is concentrated within the six miles square of a single township in the Minnesota iron region. St. Paul township, containing the cities of Hibbing and Chisholm, is an almost continuous mass of high-grade ore, about five hundred feet in depth. The value of the score of big properties—including the two greatest iron-ore producers in the world—is not less than one billion dollars. But Hibbing, sitting on a mine, is not happy. It has to move. The property was acquired subject to mineral rights (says the World's Work). The mining pits, opened by steam shovels from one to five miles in three directions and converging at the city limits, show that the city's 10,000 inhabitants dwell on a great bank of solid ore. The few and leaseholders express a desire to be liberal and to pay generous damages to property-owners; but the city must change its base. It is moving along on the installation plan, and soon a brand-new Hibbing will appear nearby, with schools, churches, banks, parks, and libraries.

Never Goes.

"I understand he's an osteopath." "I don't know, but if he is, I'll tell you one thing—he never goes to church."
